                                                                   1.69
     specimens_7d_avg percentage_7d_avg
## 1
                   NA
                                     NA
## 2
                   NA
                                     NA
## 3
                   NA
                                     NA
                   NA
## 4
                                     NA
## 5
                   NA
                                     NA
```

selecting all columns except "Total" and "Other" since these are not shown in the plot we are instructed to make

```
no_total_and_other <- variants_data[variants_data$variant_name != "Total" & variants_data$variant_name
```

call ggplot2 from library to use the package for creating the graph

NA

```
library(ggplot2)
```

use the ggplot function and subfunctions to create the graph (details explained in comments below)

```
ggplot(data=no_total_and_other, aes(x=as.Date(date), y=percentage, color=variant_name)) + # tell ggplot
geom_line() + # making a line graph/time series
scale_x_date(date_labels = "%b %Y", date_breaks = "1 month") + # change date format to month/Year (e.
theme(axis.text.x=element_text(angle = 60, hjust = 1, vjust = 1), legend.title = element_blank()) + #
xlab(NULL) + # remove x-axis label
ylab("Percentage of sequenced specimens") + # change y-axis label
ggtitle("Covid-19 Variants in California") # add graph title
```

Covid-19 Variants in California
